

Global Economic Indicators Analysis

Exploratory Data Analysis (EDA) Report

Prepared by Maheshwaran P

1. Executive Summary

This report presents an Exploratory Data Analysis (EDA) of a global economic indicators dataset containing country-level information on GDP, population, inflation, unemployment, exports, and imports.

The objective of this analysis is to identify patterns, trends, and relationships within the data to support informed decision-making and future business intelligence initiatives.

2. Dataset Overview

Dataset Name

Country Economics Dataset

Metric	Value
Number of Records	190+ Countries
Number of Features	8
Year	2026

Dataset Description

The dataset contains economic indicators for countries across the world for the year 2026.

Features

Column Name	Description
Country	Country Name
GDP	Gross Domestic Product
Population	Population Size
Inflation	Inflation Rate (%)
Unemployment	Unemployment Rate (%)

Column Name	Description
Exports	Export Value
Imports	Import Value
Year	Reporting Year
GDP_Per_Capita	GDP divided by Population

3. Objectives

The objectives of this analysis are:

- Understand the distribution of economic indicators.
 - Identify top-performing economies.
 - Analyze population and GDP relationships.
 - Evaluate inflation and unemployment patterns.
 - Examine export and import activities.
 - Generate actionable insights from the dataset.
-

4. Data Exploration Methodology

The analysis was conducted using SQL queries and statistical summaries.

The following activities were performed:

- Descriptive Statistics
 - Ranking Analysis
 - Comparative Analysis
 - Correlation Exploration
 - Multivariate Analysis
-

5. Descriptive Statistics

Descriptive statistics were generated to understand the overall distribution of the data.

Metrics analyzed include:

- Minimum Values
- Maximum Values
- Average Values
- Country Counts

Key indicators reviewed:

- GDP
 - Population
 - Inflation
 - Unemployment
 - Exports
 - Imports
-

6. Analysis & Findings

6.1 GDP Analysis

Objective

Identify countries with the highest economic output.

Analysis Performed

- Top 10 Countries by GDP
- GDP Distribution

Observation

Countries with larger economies contribute significantly to global economic activity and trade performance.

Country	GDP
United States	28700.5
China	18500.2
Germany	4500.8
Japan	4200.1
India	3950.6
Bulgaria	499.9
Algeria	498.3
Ukraine	497.1
Benin	496.4
Hungary	495.8

6.2 Population Analysis

Objective

Understand population distribution among countries.

Analysis Performed

- Top 10 Countries by Population
- Population Comparison

Observation

High population does not necessarily correspond to high economic performance.

Country	Population
India	1435.2
China	1409.5
United States	342.1
Japan	123.8
Liechtenstein	98.57
Paraguay	97.8
Madagascar	97.78
UAE	97.71
DR Congo	97.49
Angola	96.97

6.3 Inflation Analysis

Objective

Identify countries experiencing higher inflation rates.

Analysis Performed

- Highest Inflation Countries
- Inflation Distribution

Observation

Inflation varies significantly across countries, reflecting differences in economic policies and market conditions.

Country	Inflation
South Korea	8
Slovakia	8

Central African Republic	7.9
Papua New Guinea	7.7
Iran	7.7
UAE	7.7
Djibouti	7.6
Denmark	7.6
Barbados	7.4
Netherlands	7.4

6.4 Unemployment Analysis

Objective

Examine labor market conditions.

Analysis Performed

- Lowest Unemployment Countries
- Highest Unemployment Countries

Observation

Several countries maintain strong employment conditions regardless of GDP size.

Country	Unemployment
Mozambique	12
Kyrgyzstan	11.9
Iran	11.9
Finland	11.8
Belgium	11.7
Senegal	11.7
Bosnia and Herzegovina	11.6
Singapore	11.6
Comoros	11.5
Russia	11.5

6.6 GDP Per Capita Analysis

Objective

Measure economic output relative to population.

Analysis Performed

- Top GDP Per Capita Countries

Observation

GDP Per Capita provides a more balanced measure of prosperity than GDP alone.

Country	GDP Per Capita
San Marino	264.4340
Chad	159.9237
Kyrgyzstan	99.1449
Algeria	92.1072
Kiribati	91.2121
United States	83.8951
Ukraine	59.9638
Congo	58.3389
Serbia	57.1725
Nepal	56.6050

7. Data Visualizations

The following visualizations were created:

Column Charts

Top Population Countries

Top GDP Countries

8. Key Insights

- Economic performance varies considerably across countries.
- Population size alone is not a reliable indicator of economic strength.
- Countries with strong export activity often exhibit stronger economic performance.
- Inflation and unemployment trends differ significantly between regions.
- GDP Per Capita offers deeper insights into living standards and economic prosperity.

9. Recommendations

- Monitor GDP Per Capita alongside GDP for better economic comparisons.
- Consider trade indicators when evaluating economic competitiveness.
- Analyze inflation and unemployment together for a broader economic perspective.
- Utilize interactive dashboards for ongoing monitoring and reporting.

10. Conclusion

The exploratory analysis successfully identified patterns, trends, and relationships within the global economic indicators dataset.

The findings generated through SQL-based analysis provide a strong foundation for advanced analytics, dashboard development, and data-driven storytelling.

11. Tools Used

- SQL
 - MySQL Workbench
 - Microsoft Excel
 - GitHub
-

12. Appendix

Files Included

- EDA SQL Queries
- Dashboard Mock-up
- Dataset
- Data Dictionary
